

Dataspire Cloud Accelerator

Benefits of the Dataspire Cloud Accelerator

Easy cross-site working or working on the go

Schools can lessen their per-user carbon footprint by between: 30% and 90%

Improvements in remote teaching and learning

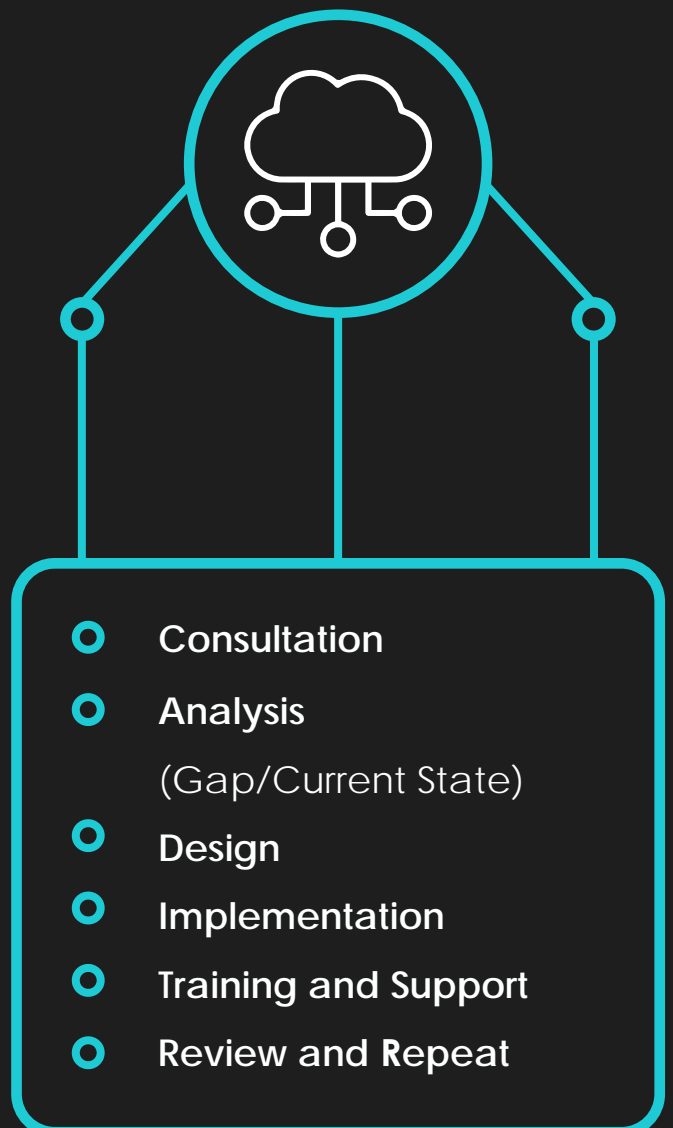

Introducing the Dataspire Cloud Accelerator

We are all aware that school budgets are under increasing pressure and any edtech aspirations and service improvements need to be balanced with the funding available. With carbon reduction and energy efficiency now high on the education agenda, we know that schools are looking for simple ways to upgrade their IT estates to enable the efficient and effective use of Cloud services.

That's why we've created the Dataspire Cloud Accelerator

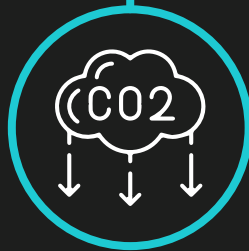

The Dataspire Cloud Accelerator is a solution designed specifically for education that will take you step-by-step through moving your school to the Cloud. From understanding your requirements and their implementation, all the way through to training and support, we've done all the groundwork so that you don't have to.

Our experienced team will work with your school to examine what you already have, what you need and what you are hoping to achieve before designing the best solution for you within the time-frame and budget available.

Collaboration and communication between staff

Moving software applications to the cloud could cut energy use by up to 87%

Many schools also experienced improved in-school learning

What's included in the Daspire Cloud Accelerator?

As well as helping your school efficiently migrate your servers, software and systems into the cloud, the Daspire Cloud Accelerator will help you to reduce your establishment's carbon impact on the environment.

- **We will help you to access the benefits of becoming a serverless site by conducting a thorough business case.** This would include an examination of your actual energy utilisation for ICT elements, which, when coupled with an analysis of overheads and refresh estimates, can demonstrate the net savings per month that such changes can bring.
- **We can construct an energy consumption and heat output calculation sheet,** which details the projected energy consumption for each product proposed and the predicted heat output loads.
- **Working with Positive Planet, we can produce a summary report.** The report would include a full school carbon reduction plan helping you understand your carbon footprint and enabling you to make brave, data-led decisions.
- **As an ISO 27001 and Cyber Essentials accredited organisation, we can also offer data shredding and erasure services.**
We work with local and national charities to save redundant IT equipment from being sent to landfill, ensuring instead that any usable devices are securely data-wiped before being sent to people in digital poverty such as children in developing countries and unemployed veterans. We also partner with technology suppliers who can give you cashback on old devices to reinvest in new devices.

Expert Advice

Our team comprises of experts who can provide advice and guidance on how to transform the use and future development of your Cloud infrastructure. These include educationalists who can deliver tailored training and CPD to both staff and students. For example, helping to optimise the educational benefits of using Microsoft 365 or Google Workspace for Education.

We also work with consultants who are currently advising the Department for Education in their GenZero strategy. Their expertise and knowledge can bring your establishment towards meeting these ambitious targets, including new OFSTED inspection criteria for carbon reduction.

We're certain that you were already aware of the benefits available to education through the Cloud and we're also certain that the only thing holding you back, is the lack of guidance and/or a blueprint to set these wheels in motion.

And that's where we can help!

Moving your school to the cloud is now a viable and practical solution, so why not give us a call to discuss your options?

The team will be delighted to support you through this process and answer questions you may have, so contact us today!
